

Ethan Rohman

Full Stack Software Developer

ethanmrohman@gmail.com · 507-676-5914 · github.com/EthanRohman93 · ethanrohmandev.com

Summary

Full stack software developer with four years of experience, currently consulting across healthcare and agricultural technology clients. Builds REST APIs in Spring Boot and Node.js, React and TypeScript front ends, and AWS infrastructure managed with Terraform. Focused on shipping reliable production software with strong testing coverage.

Experience

QCI (Quality Consulting Inc.)

Software Developer

Des Moines, IA

July 2024 – Current

Consulting software developer serving two clients: John Deere, on their operations center web application, and Michigan Health Association, on a management web application serving hospitals and health systems. Work spans the full stack including AWS services, Terraform-managed infrastructure, and CI/CD.

John Deere — Operations Center Application

- **Late 2024:** Maintained existing applications with package upgrades, improving documentation and test coverage while building business domain knowledge.
- **Early 2025:** Delivered front end feature work in a React and TypeScript environment; rewrote an existing React and TypeScript application to improve performance; expanded integration and end to end test coverage; established database management for a microservice including Terraform deployment and Flyway migrations.
- **Mid 2025:** Built a Spring Boot REST API from scratch, managing AWS services from the API including DynamoDB, RDS, and SQS; wrote unit tests with proper mocking of external libraries.
- **Late 2025:** Continued front end feature work including large library upgrades; managed infrastructure with Terraform; expanded database and API usage to support data validation.
- **Early 2026:** Integrated metrics and visibility solutions alongside package updates; delivered micro front end feature work supporting bulk operations; added CDN caching to website infrastructure.
- **Mid 2026:** Maintained React and TypeScript front ends and Node.js backends through feature work, bug fixes, and package updates; built substantial front end work on a new TypeScript and React application focused on state management for a data entry heavy product; delivered backend features including S3 file management and database work.

Michigan Health Association — Management Web Application

- **Early 2026:** Supported a legacy ASP.NET application.
- **Mid 2026:** Took a lead role rewriting the legacy ASP.NET application with Blazor and a modern full stack architecture, ramping quickly on a new stack.

UnitedHealth Group (Surest: A UnitedHealth Company)

Data Science Intern

Minneapolis, MN

May 2022 – May 2024

- Analyzed text message campaign engagement using Python, Pandas, and SQL.

- Developed a question and answer bot using sentence transformers and a custom embedding model vector store, managing deployment with MLflow.
- Extended search capability with embedding models and a custom vector store.
- Built and tested against local Elasticsearch instances to tune search parameters.
- Contributed to PySpark pipelines in Databricks and Ascend, working with AWS S3, GitHub, and Jenkins automation.
- Presented findings to groups of up to 40 people, translating technical detail into business insight.

Skills

- **APIs:** Spring Boot, Node.js, Hapi.js, FastAPI, Django
- **Front End:** React, Redux, Next.js, TypeScript, JavaScript, Blazor, CSS, SASS, Tailwind, HTML
- **Database:** PostgreSQL, AWS Aurora PostgreSQL, DynamoDB, MongoDB, Elasticsearch, Flyway
- **Infrastructure:** Terraform, AWS (IAM, EC2/ECS, S3, SQS, RDS, DynamoDB, networking), Docker, AWS CLI
- **CI/CD:** GitHub Actions, Jenkins, Bash automation
- **Testing:** Playwright (E2E and integration), Vite, Jest, JUnit, Pytest
- **Tools:** Vim, Neovim, Tmux, Git

Education

Drake University
Bachelor of Science in Computer Science

Des Moines, IA
GPA: 3.86

Tools & Side Work

Finance web application built with PostgreSQL, Django, and Next.js; a hot-reloading LaTeX to PDF build pipeline; and ongoing work with low level languages (Zig, C, Rust) and reproducible editor environments using Vim, Neovim, and Tmux.
