

Ethan Rohman

Full Stack Software Developer

ethanmrohman@gmail.com · 507-676-5914 · github.com/EthanRohman93 · ethanrohmandev.com

Summary

Full stack software developer with four years in software engineering, currently consulting across healthcare and agricultural technology clients. Experienced building REST APIs in Spring Boot and Node.js, React/TypeScript front ends, and AWS infrastructure managed with Terraform. Focused on shipping reliable production software with strong testing coverage.

Experience

QCI (Quality Consulting Inc.) **Des Moines, IA** *Software Developer* **July 2024 – Current**

Consulting software developer across two clients: John Deere, working on their operations center web application, and Michigan Health Association, a management web application serving hospitals and health systems. Work spans the full stack including AWS services, Terraform-managed infrastructure, and CI/CD.

John Deere – operations center application

- **Late 2024:** Maintained existing applications with package upgrades, improving documentation and test coverage while learning business domain knowledge.
- **Early 2025:** Delivered front end feature work in a React/TypeScript environment; rewrote an existing React/TypeScript application to improve performance; expanded integration and end to end test coverage; set up database management for a microservice including Terraform deployment and Flyway migrations.
- **Mid 2025:** Built a Spring Boot REST API from scratch, managing AWS services from the API including DynamoDB, RDS, and SQS; wrote unit tests with proper mocking of external libraries.
- **Late 2025:** Continued front end feature work including large library upgrades; managed infrastructure with Terraform; expanded database and API usage to support data validation.
- **Early 2026:** Integrated metrics and visibility solutions alongside package updates; added feature work to a micro front end application to support bulk operations; added CDN caching to website infrastructure.
- **Mid 2026:** Maintained React/TypeScript front ends and Node.js backends with feature work, bug fixes, and package updates; built substantial front end work on a new TypeScript/React application focused on state management for a data-entry-heavy product; added backend feature work including S3 file management and database features.

Michigan Health Association – management web application

- **Early 2026:** Provided support for a legacy ASP.NET application.
- **Mid 2026:** Took a larger role rewriting the legacy ASP.NET application using Blazor and modern architecture, full stack, ramping quickly on the stack.

UnitedHealth Group (Surest: A UnitedHealth Company) **Minneapolis, MN** *Data Science Intern*
May 2022 – May 2024

- Analyzed text message campaign engagement with Python, Pandas, and SQL.
- Developed a question-answer bot using sentence transformers and a custom embedding model vector store,

managing deployment with MLflow.

- Improved search with embedding models and a custom vector store.
- Built and tested against local Elasticsearch instances to fine-tune search parameters.
- Contributed to complex PySpark pipelines in Databricks and Ascend, working with AWS S3, GitHub, and Jenkins automation.
- Presented findings to groups up to 40 people, translating technical details into business insights.

Skills

- **APIs:** Spring Boot, Node.js, FastAPI, Django, Hapi.js
- **Front End:** React, Redux, Next.js, TypeScript, JavaScript, CSS, SASS, Tailwind, HTML, Blazor
- **Database:** MongoDB, PostgreSQL, AWS Aurora PostgreSQL, DynamoDB, Elasticsearch, Flyway
- **CI/CD:** GitHub Actions, Jenkins, Bash automation
- **Infrastructure:** Terraform, AWS (IAM, EC2/ECS, S3, SQS, RDS, DynamoDB, networking), Docker, AWS CLI scripting
- **Testing:** Playwright E2E and integration, Vite, Jest, JUnit, Pytest, Zig test
- **Tools:** Vim, Tmux, Neovim, Git

Education

Drake University	Des Moines, IA <i>Bachelor of Science in Computer Science</i>	GPA: 3.86
------------------	---	-----------

Tools & Side Work

Personal tools and experiments: a finance web application (PostgreSQL, Django, Next.js), a hot-reloading LaTeX-to-PDF build pipeline, and ongoing exploration of low level languages (Zig, C, Rust) and reproducible editor setups with Vim, Tmux, and Neovim.
