Summary

I am a full-stack software developer with four years of experience, currently consulting through QCI for John Deere on their operations center application and for the Michigan Health Association on a management web application serving hospitals and health systems. The expertise I contribute is on the backend: building APIs, data models, and the infrastructure underneath them. My approach starts with the documentation and API contracts of the systems I am building on rather than assumptions, and I carry that same discipline into REST APIs built in Spring Boot and Node.js, React and TypeScript front ends, and Terraform-managed AWS infrastructure, producing code that is explicit about its constraints, well-tested, and easy to maintain.

Experience

QCI (Quality Consulting Inc.) **Des Moines, IA**
Software Developer *July 2024 – Current*

Consulting for two clients, working full stack across AWS, Terraform-managed infrastructure, and CI/CD.

- **Mid 2026 – Current:**
  - **John Deere:** Delivered front-end feature work and state management for a new React and TypeScript data-entry-heavy application; extended the same Spring Boot API with S3 file management and additional database features.
  - **Michigan Health Association:** Took an expanded role, beyond the earlier support work, rewriting the legacy ASP.NET application in Blazor with C# and Razor components. The rewrite was initially scoped to evaluate the viability of AI-assisted development on a business-logic-heavy codebase, with the team later shifting to applying AI selectively as needed. Because framework knowledge was expected to come from AI assistance, the usual upfront ramp-up on libraries and frameworks was not carried out beforehand.
- **Early 2026:**
  - **John Deere:** Integrated Datadog metrics and observability alongside package updates; delivered micro-frontend feature work supporting bulk operations; added CDN caching to website infrastructure.
  - **Michigan Health Association:** Supported a legacy ASP.NET application by fixing bugs and delivering enhancements to the existing system.
- **Late 2025 (John Deere):** Continued front-end feature work, including major library upgrades; continued to manage infrastructure with Terraform; expanded database and API usage to support data validation.
- **Mid 2025 (John Deere):** Built a Spring Boot REST API from scratch, managing AWS services including DynamoDB, RDS, and SQS; set up full testing along with Datadog metrics and visibility.
- **Early 2025 (John Deere):** Delivered React and TypeScript feature work; rewrote an existing application to improve performance; expanded integration and end-to-end test coverage; established database management for a microservice with Terraform deployment and Flyway migrations.
- **Late 2024 (John Deere):** Maintained existing applications through package upgrades, improving documentation and test coverage while building business domain knowledge.

UnitedHealth Group (Surest: A UnitedHealth Company) **Minneapolis, MN**
Data Science Intern *May 2022 – May 2024*

- Analyzed text message campaign engagement using Python, Pandas, and SQL.
- Built a question-answering bot using sentence transformers and a custom embedding-model vector store deployed with MLflow; extended search with embedding models tuned against local Elasticsearch instances.
- Contributed to PySpark pipelines in Databricks and Ascend using AWS S3, GitHub, and Jenkins; presented findings to groups of up to 40 people.

Skills

- **Back End:** Spring Boot, Node.js, .NET, Hapi.js, FastAPI, Django
- **Front End:** React, Redux, Next.js, TypeScript, JavaScript, Blazor, CSS, Sass, Tailwind, HTML
- **Data:** PostgreSQL, AWS Aurora PostgreSQL, DynamoDB, MongoDB, Elasticsearch, Flyway
- **Infrastructure & CI/CD:** Terraform, AWS (IAM, EC2/ECS, S3, SQS, RDS, DynamoDB, networking), Docker, AWS CLI, GitHub Actions, Jenkins, Bash
- **Testing & Tools:** Playwright (end-to-end and integration), Vite, Jest, JUnit, Pytest, Neovim, Tmux, Git
- **Side Work:** Finance web application (PostgreSQL, Django, Next.js); hot-reloading LaTeX-to-PDF build pipeline; low-level languages (Zig, C, Rust)

Education

Drake University **Des Moines, IA**
Bachelor of Science in Computer Science, Minor in Mathematics, GPA: 3.86 *2020 – 2024*
